🐙 [DSouzaM](https://github.com/DSouzaM)

Skills

- Fluent in Python, Scala, Java, C++, Ruby, and SQL; familiar with HTML, CSS, and JS
- Breadth of data engineering experience using Hive, Presto, MongoDB, Redis, and Spark
- Experience developing infrastructure using AWS, Chef, Prometheus and Google Analytics

Experience

Sep–Dec 2017 **Relevancy Engineering Intern** | *Wish* | Toronto, Ontario

- Wrote Luigi pipelines and cron jobs to generate data essential to product features; improved the performance of an existing job by a factor of 40
- Enabled consistent data changes across Redis nodes by building a system to pre-load future data
- Implemented backup, restore, and monitoring of graph databases using AWS and Prometheus
- Designed new product feeds to promote branded items within Wish and Geek apps

Jan–Apr 2017 **Data Platform Engineering Intern** | *Shopify* | Toronto, Ontario

- Maintained and improved ETL systems written in JRuby, Scala (Spark), and Python
- Reduced overlap between incremental extraction jobs by 95% after using Spark to identify late-arriving data from historical logs
- Built new connectors to incrementally extract data from Google Cloud and third-party APIs
- Improved developer efficiency by automating environment setup and project build process

May–Aug 2016 **Software Engineering Intern** | *Veeva Systems* | Toronto, Ontario

- Built a Spring service to asynchronously send backend metrics to Google Analytics
- Identified problems with the product and took ownership of implementing solutions
- Developed enhancements and fixes using Java, SQL, and HTML/CSS/JS

Projects

2017 **Language Analysis** | 🐙 DSouzaM/LanguageAnalysis

- Built a Scala wrapper for the GitHub API to scrape data, using Slick to interface with MySQL
- Implemented a simple tokenizer and used TextRank to extract keywords from READMEs
- Used K-means clustering to group similar repositories and look for language trends

2016 **Employment Stats** | 🌐 mattdsouza.com/EmploymentStats

- Developed a Python scraper to incrementally extract information about co-op employment
- Designed a web app to visualize and explore time-series data with Flask and Highcharts

Education

2015–2020 **Candidate for Bachelor of Software Engineering, 4.0 GPA** | *University of Waterloo*

- Undergraduate Research Assistant (2016): Experimented with Bazel and Java 9 compatibility for an annotation-based type-checking framework

Interests

- Volleyball
- Functional programming & programming languages
- Playing acoustic guitar (sometimes tolerably)
